## CHAMBER MACHINE

Chamber machine is ideal to pack small and medium products with polyolefin film and PVC. The operator, after having regulated the height of the packaging plate and roll support according to the characteristics of the product, he lowers manually the sealing bar complete of chamber so that the welding and the shrinking happen in only one operation. To guarantee an excellent result, simple and economic to reduced power consumption. The release of the chamber is in automatic (in the model with magnet).

### JOLLY

|   |                                 |
|---|---------------------------------|
| Sealing bar (mm)                                      | 550 x 420                       |
| Max reel sizes (mm)                                   | Ø 250 x 550                     |
| Max pack height (mm)                                  | 220                             |
| Power (kW)  | 2,9                             |
| Power supply  | 220-240 V 1 Ph + N + T 50/60 Hz |
| Weight (kg)   | 80                              |
| Overall dimensions on length with chamber closed (mm) | 1200 x 800 x H1200              |
